

While the 75 series does not actually support Linen stock, it can be worked with.

To do that, go to the copier and log in as the admin.

Then go to **Machine Status > Tools > Common Service Settings > Paper Tray Settings > Custom Paper Settings**  
Choose one and give it a name, and adjust the **Adjust Image Transfer** setting

Usually the percentage needs to be raised, I suggest going in increments of 10% for both sides until you get a number that works with your stock

Then load a tray and choose the created Paper type from the list. (I called mine **Lin** in the above steps)
